

Intelligent Information Management

Intelligent Information Management is the strategies, methods, modules, and solutions that together manage the lifecycle of content and data from creation to disposition.

Intelligent Information Management conquers the information silos created by traditional ECM and Data management solutions; it offers a venue that allows users to locate the latest and most accurate information available to them using simple search operations, regardless of information location or user location.

Intelligent Information Management (IIM) takes the power of information to a new level and when powered by Machine Learning and Artificial Intelligence, IIM becomes a decision-making aiding tool for end-users as well as organization management.

Highly Regulated

Benefits

- Content and Data driven
- Information is stored and retrieved based on "What" not "Where"
- Uses intelligence engines for backend processing and classification
- Uses any device to access, edit and find information (Desktop, Browser, Tablet, Mobile)
- Pre-built connectors to external repositories for access and search
- On-Premise, Cloud and Hybrid based deployment
- Easy to use with minimal end user training
- Eases Remote work and access to information
- Backend process automation

Modules

- Document Management
- Data Management
- Security, Encryption & Audit Trails
- Capture & OCR
- Workflow & Process Designer
- MS Office & Outlook integration
- Virtual Data Rooms
- Contract Management
- Collaboration
- Intelligence Engines
- Case Management
- Enterprise Search
- Intelligent Invoice Processing
- Email Management
- Connectors: SAP, SharePoint, Salesforce,
